Nightmares in Robotic & Laparoscopic Urologic Surgery
Prevention and Management of Complications:

Come to the Intuitive Headquarters to learn how to stay out of complications!

Course Director: René Sotelo, MD
Faculty: Monish Aron, MD; Inderbir Gill, MD; James Poter, MD; Michael Stifelman, MD

WET LAB SIMULATION OF COMPLICATIONS
- Conference
- Case Discussion
- Round Table

USC video-based course that discusses specific laparoscopic and robotic surgery cases. This course provides the world’s largest collection of surgery examples, covering the entire range of potential surgery complications. This course will also offer guidance into the management options available for laparoscopic and robotic surgery. The course reviews the most common complications; simple to life-threatening related to intraoperative and postoperative issues. The course also covers early recognition of potential complications, and also gives advice on when surgeons may need a second opinion or a specialist.

We will show video presentations of real cases to provide examples of complications, which are augmented by critical analysis of different surgery situations, and lessons learned from each case. The most effective way to avoid complications during surgery is awareness of possible problems at each stage of the process, and knowing strategies to avoid these problems or solve them in real time.

Don’t miss the world’s largest complications video collection from all over the globe.

December 1 – 2, 2016
Location: Intuitive Surgical Inc, Sunnyvale, California

Physician/Surgeon $500
Resident/Fellow $250

Please RSVP to Regina Rezex rezex@usc.edu 323-865-3594
